

THE WORLD OIL MARKET

A SYSTEM DYNAMICS APPROACH

Michel KARSKY
ELF AQUITAINE

For example (see Fig. 1) coverage and price are linked by an economic-type relation

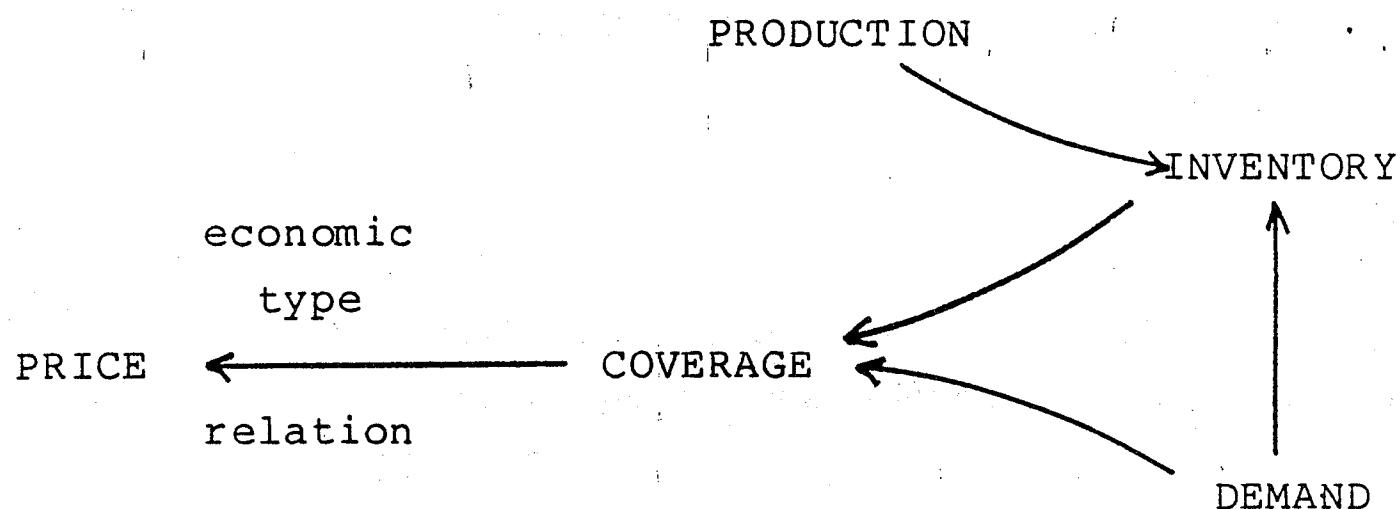

Fig. 1

But coverage acts relatively to its desired or usual value
(Fig. 2).

By introducing the notion of "desired" value, we define
"fuzzy" psychological link.

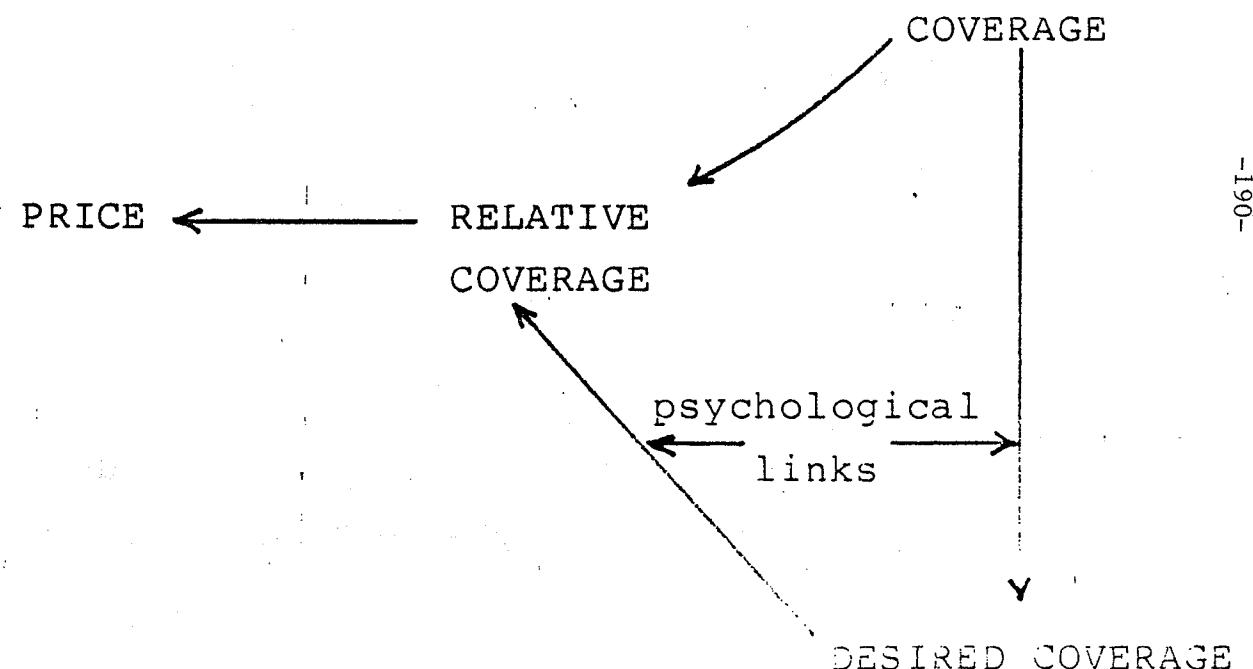

Fig. 2

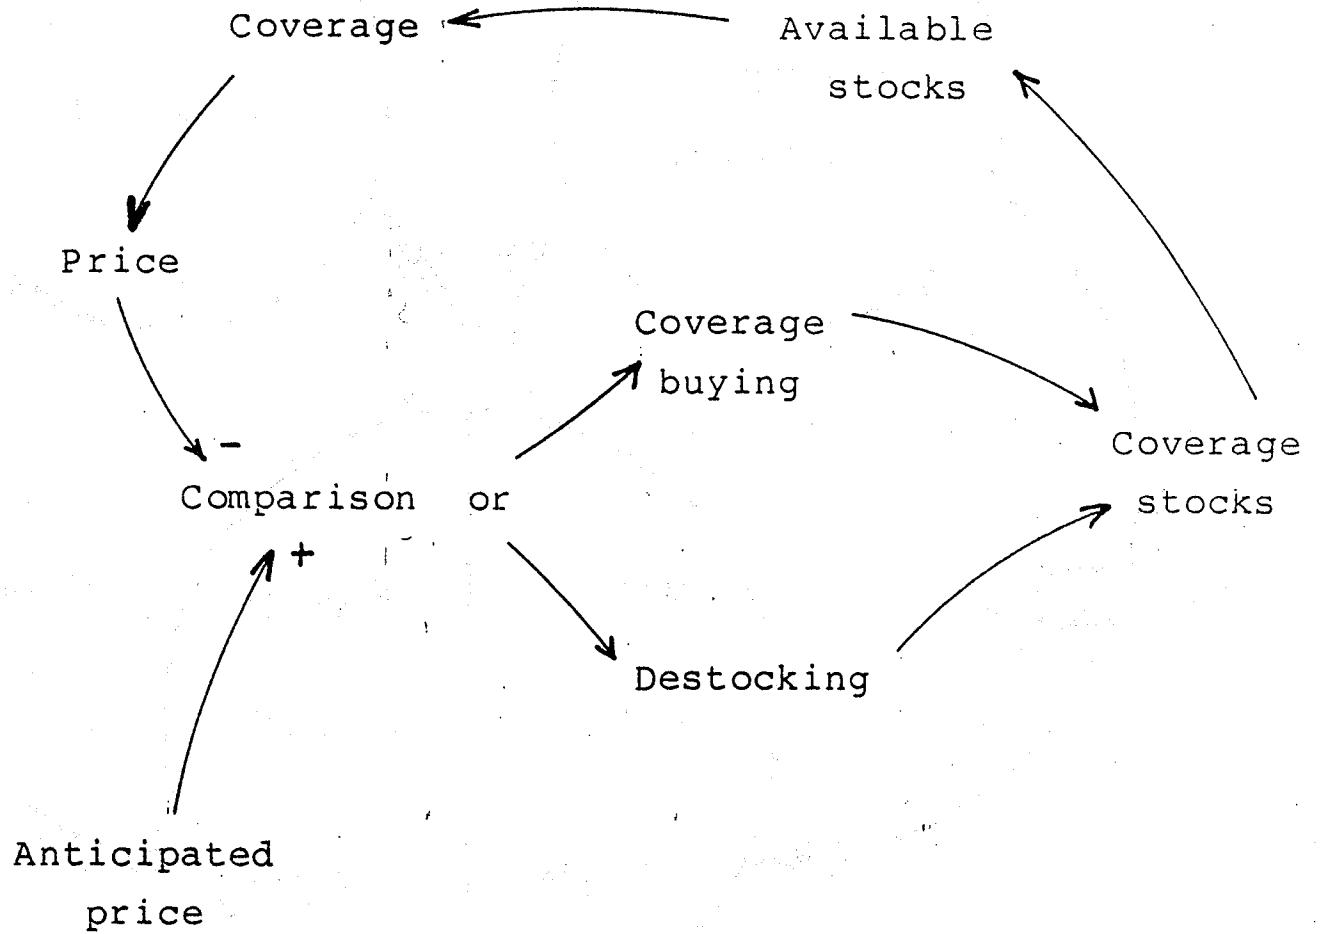

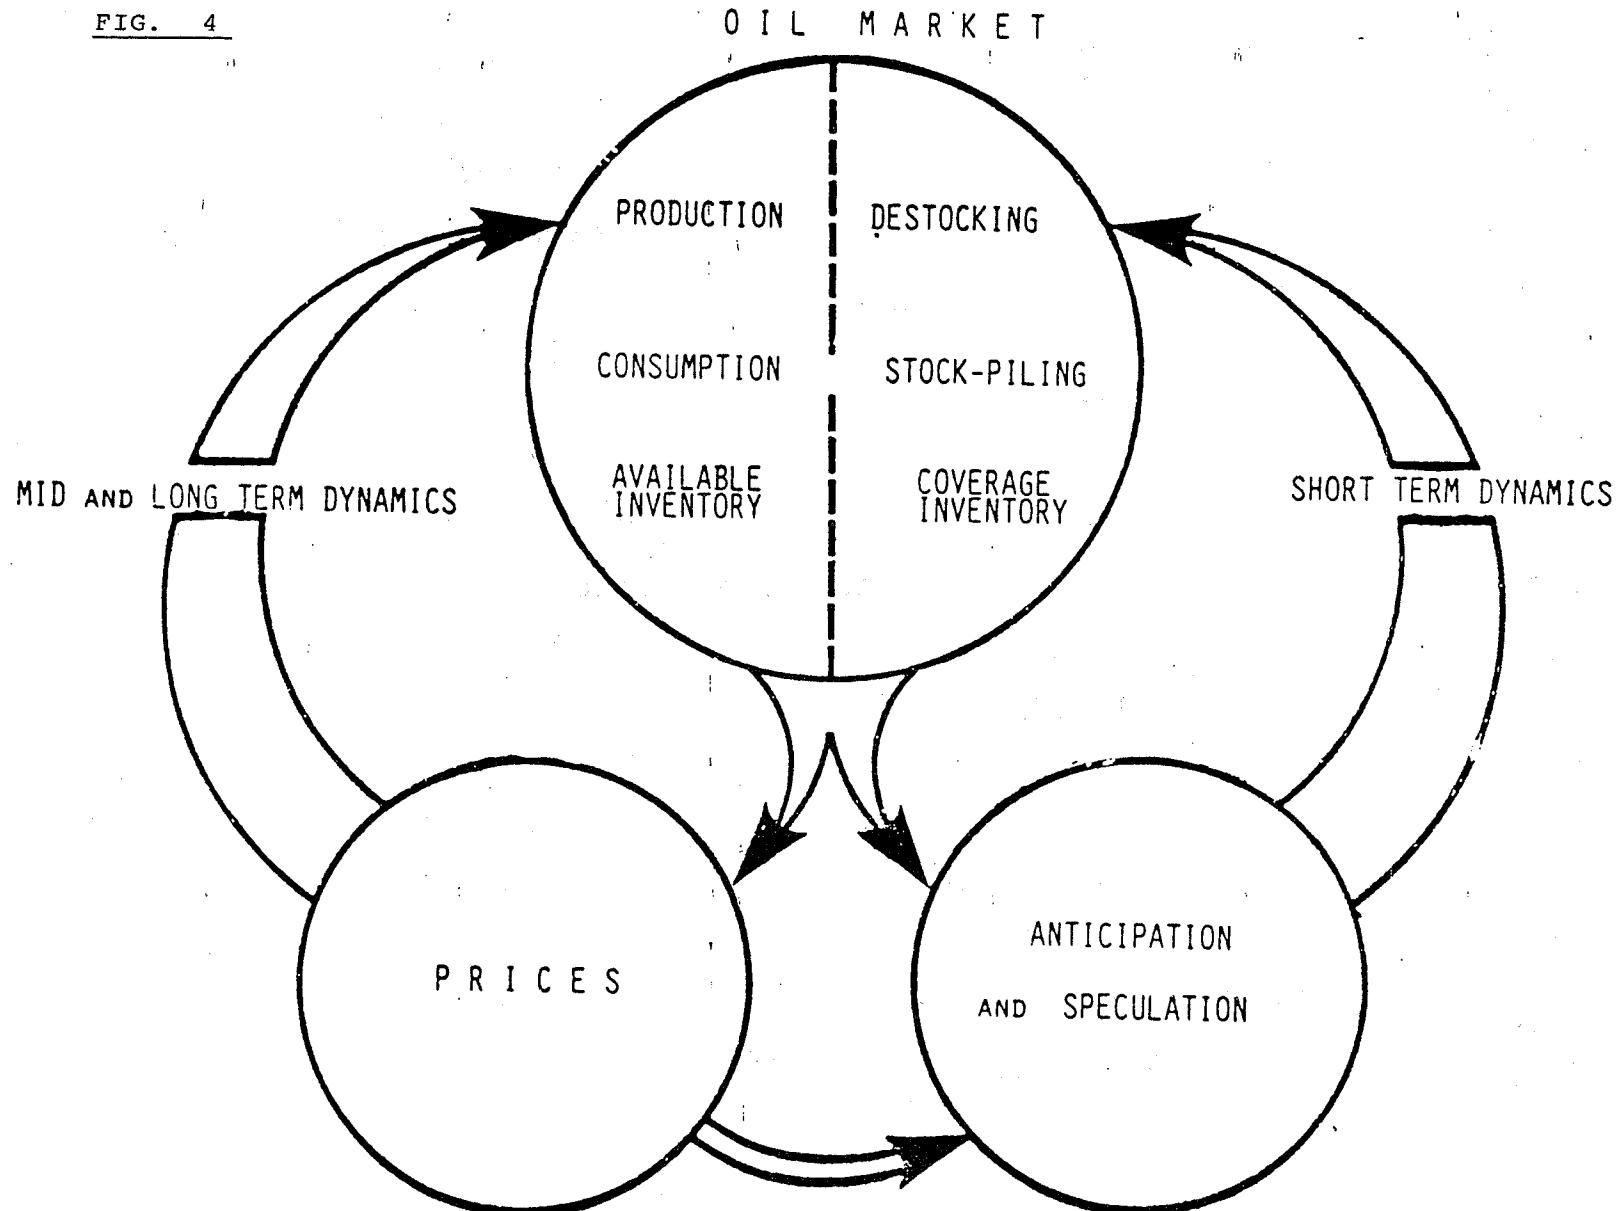

FIG. 3

FIG. 4

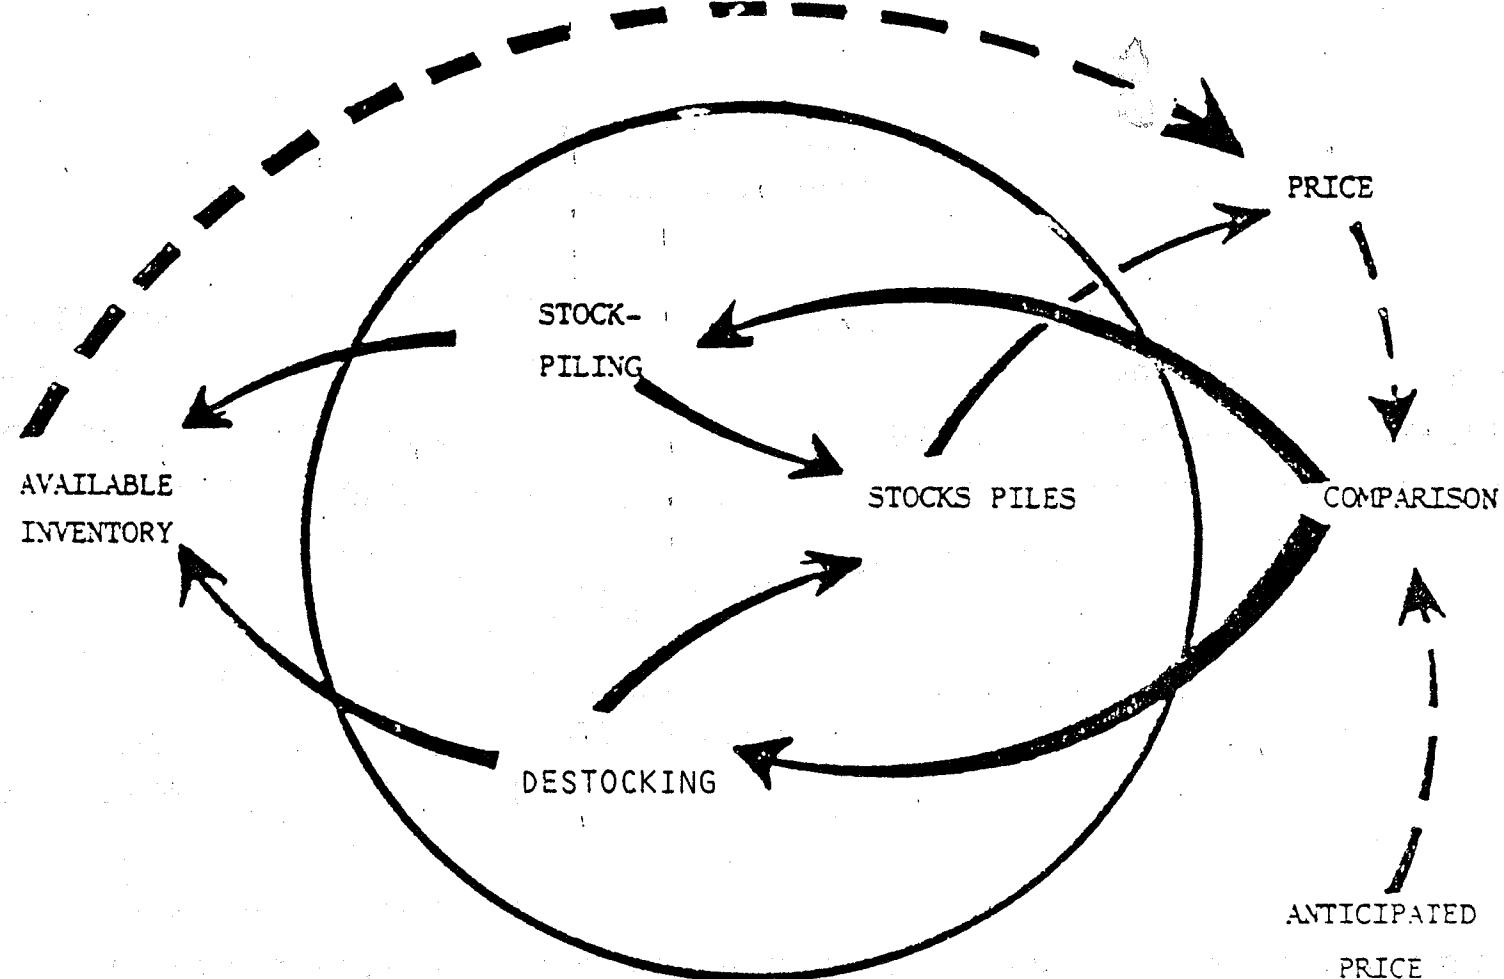

Fig. 5

Although physically undistinguishable (hence difficult to quantify), running inventories and stock-piles result from very different types of transactions and also have very distinct effects on price and on the behavior of the consumers in our model.

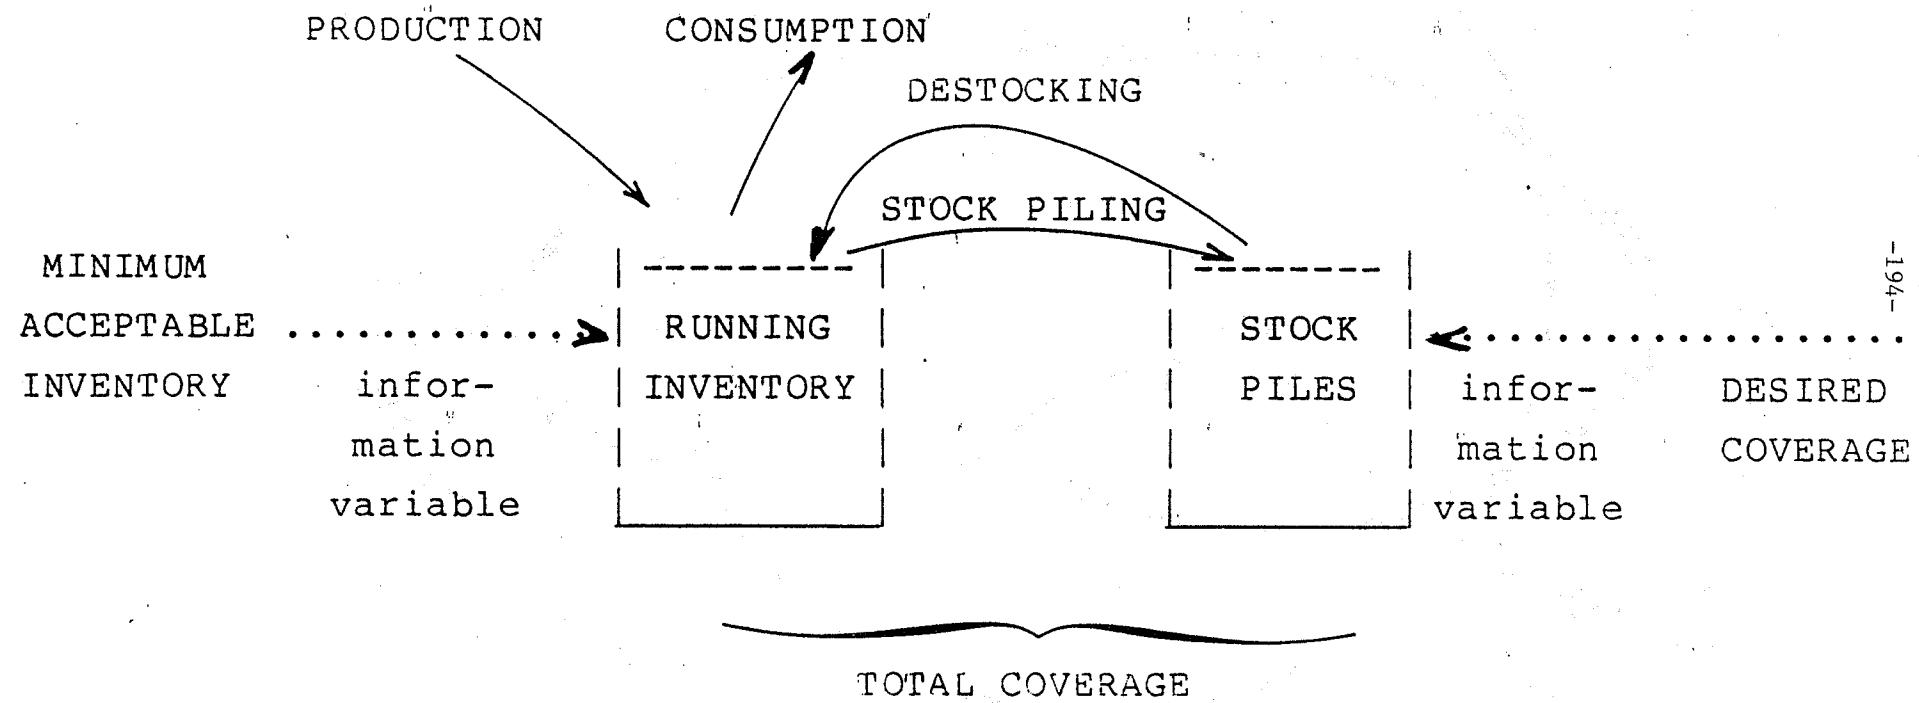

Fig. 6

13.

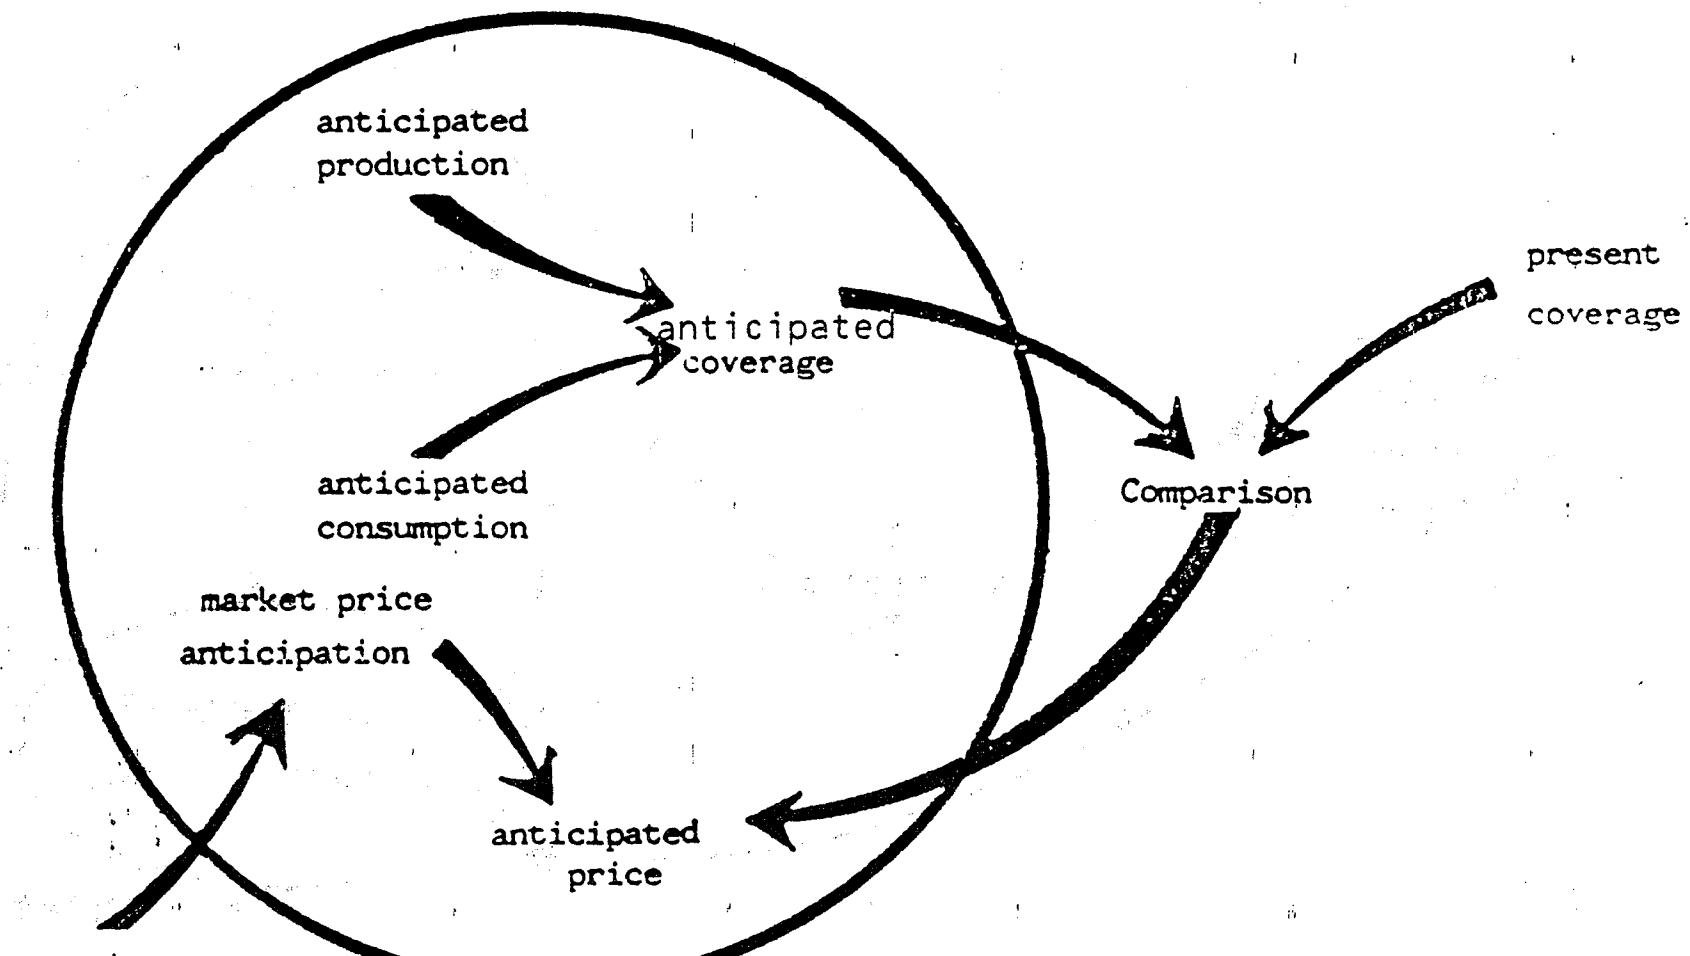

Fig. 7

The complete model is thus the interconnection of these three sectors :
