Economic growth in the core of economic development. The quality of economy is a vital to economy strengthening, economic development, and improvement of living quality in a country or region. The quality of economic growth mainly depends on the pattern of economic growth. How to define and measure the evolution degree is a complicated systematic work, it is incomparable. This study lays emphasis on establishing model on quantitative research.

By studying comprehensively and deeply many factors that affect the benefit and efficiency of National economic operation, We put forward a measuring system of economic growth intensification. By measuring the intensification index of labor, energy, investment, loan and industry, we achieve a synthetical index and simulate it by s.d. model.
