

# Building Survivable Enterprises

# A Stable Environment

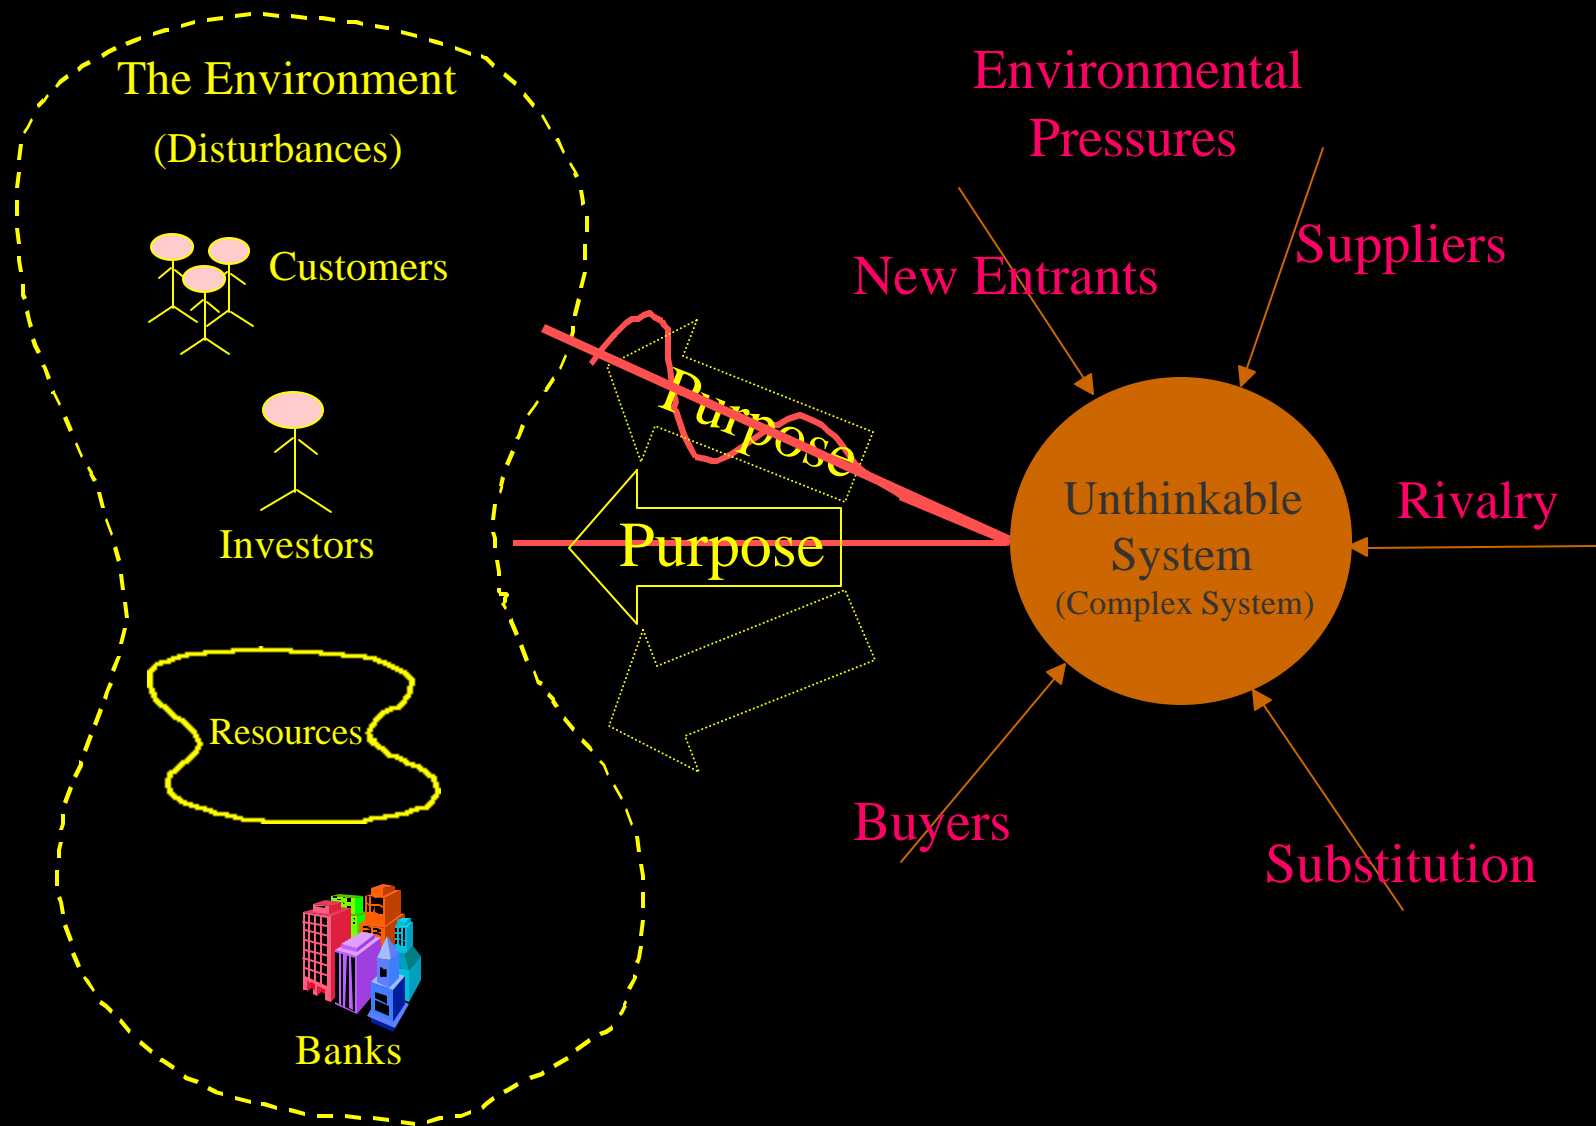

*Unrealistic*

The Business is unable to deal with the variety within the disturbance and goes into receivership

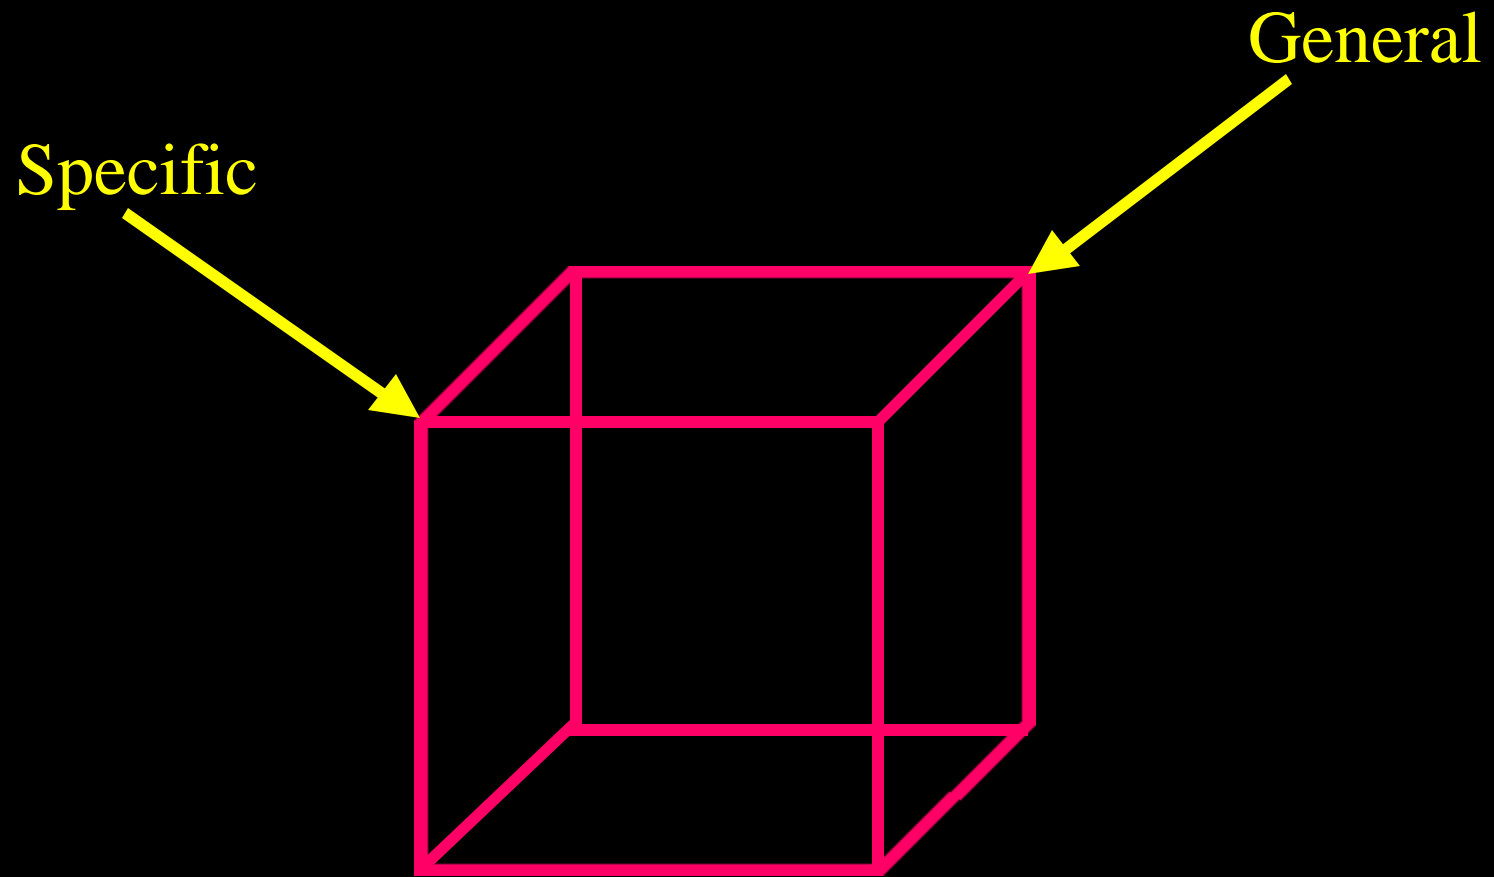

Our problem is that the lags in our systems of implementation are greater than the opportunities that exist to respond

# The Chaotic Environment

*The specific has no meaning and the general has no content*

# Enterprise Ontology

Systems of ontology propose alternative categorised schemes that must embrace everything that exists that manifest that entity

- Living Systems
- Cybernetic
- Variety
- Kaleidoscopic Embryology
- Genes/Memes
- Fractal
- Holographic
- Homeostatic (Syntegrity to mediate massive 3/4)
- Information & Mental Models (2<sup>nd</sup> Order Cybernetics)
- Asynchronous
- Value Vector
- Transformational & Transactional
- Actions & States
- OR - FORM
- Behavioural Science - FORM

# Living Systems

## Reproduction

- Crystals
- Mules

## Metabolism

- dormant micro-organisms

## Nutrition

- Jupiter red spot

## Complexity

- Hurricanes

## Metamorphosis - Form

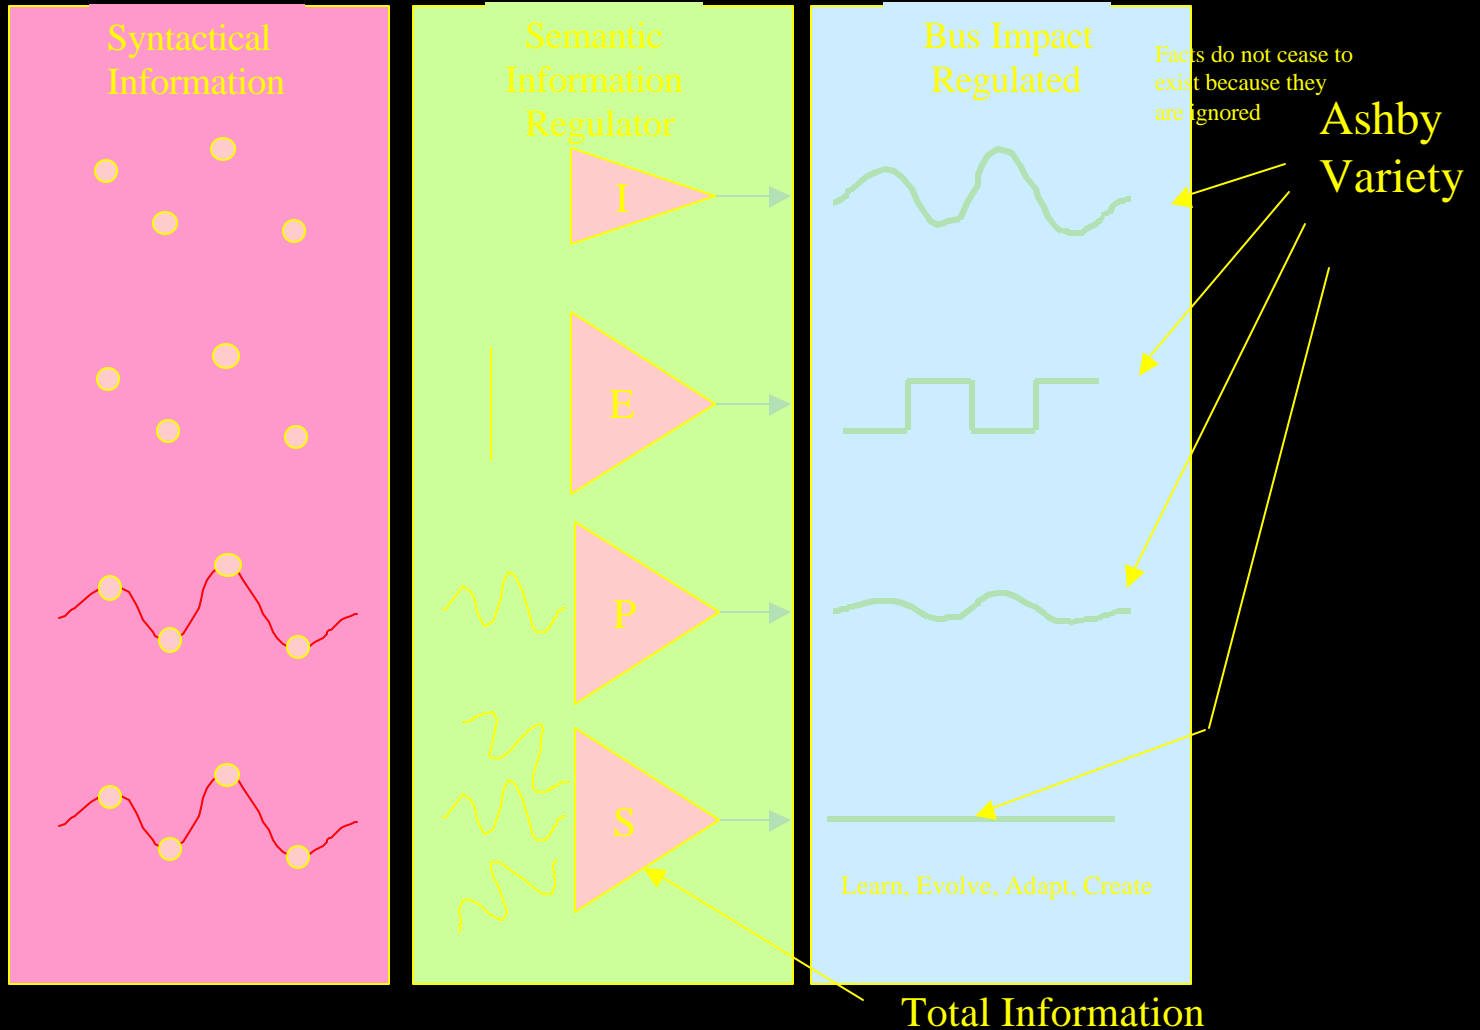

# Cybernetics

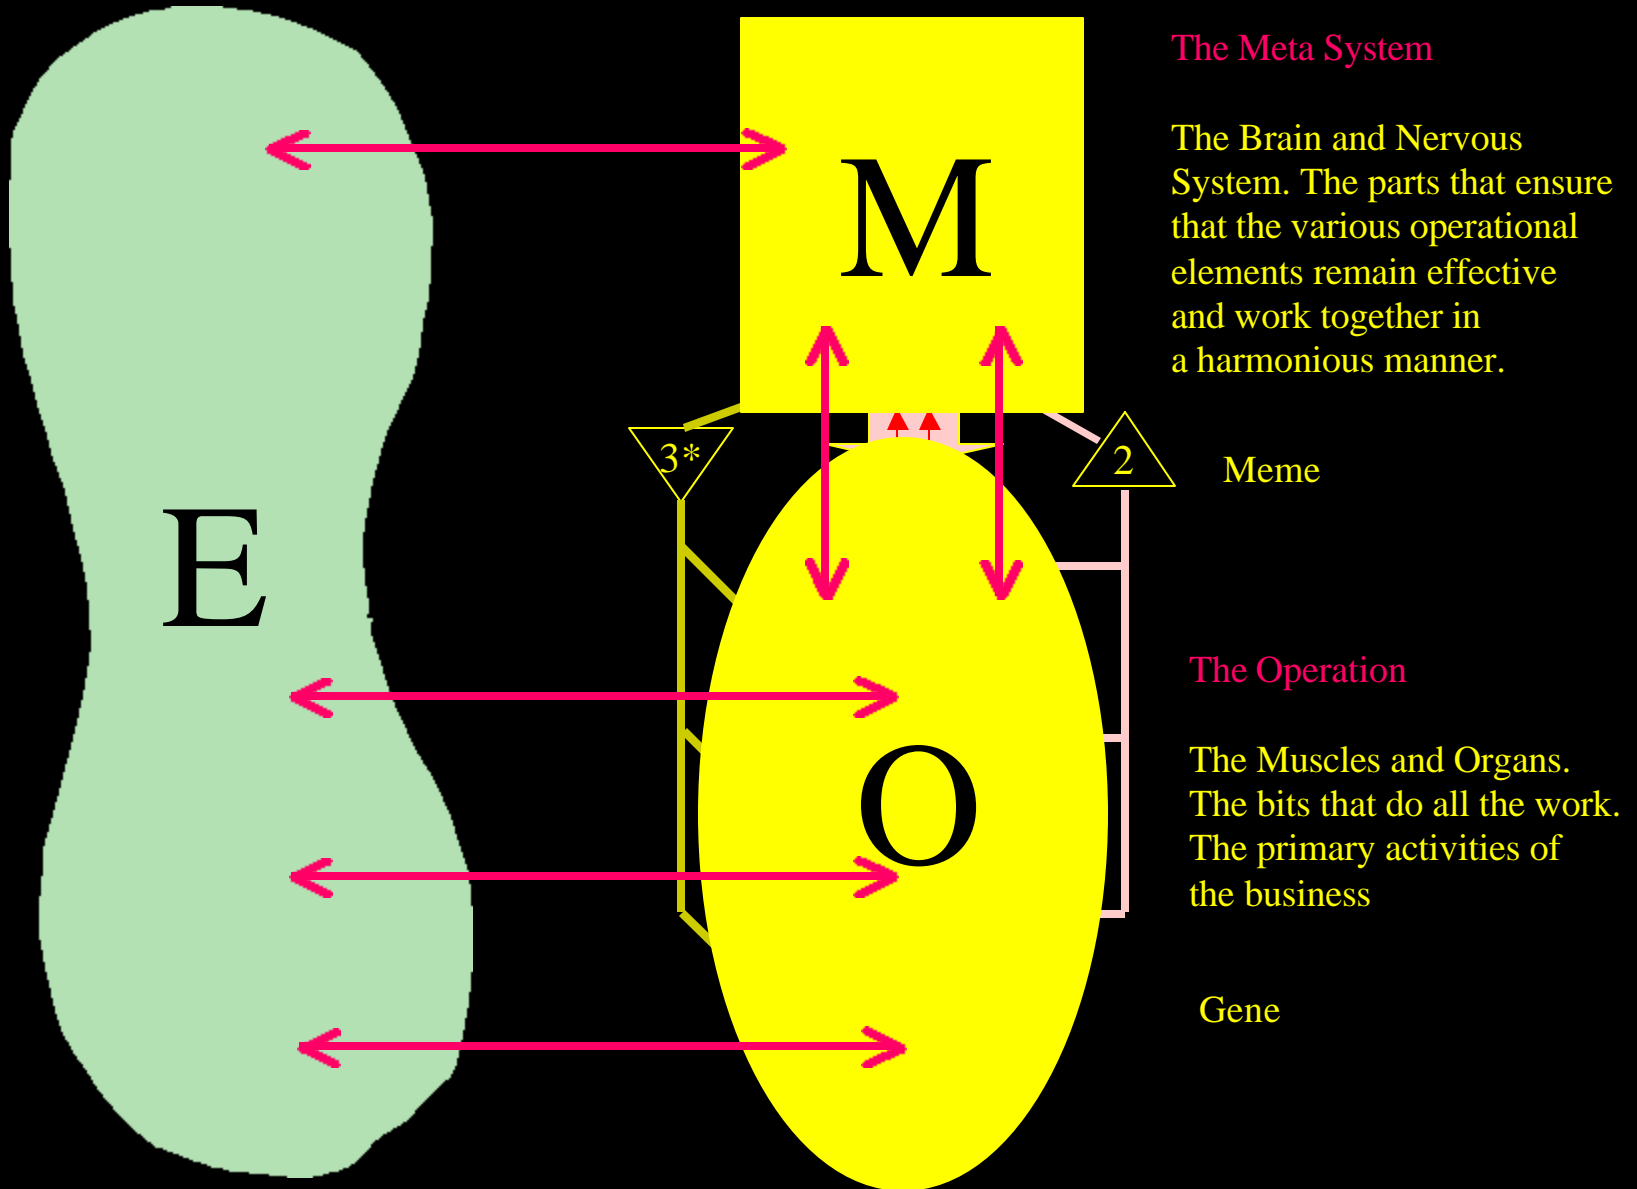

*The science of Information, Co-ordination, Control,  
Regulation in Complex Machines*

*In a word as the art of "steersmanship"*

# Types of Regulation

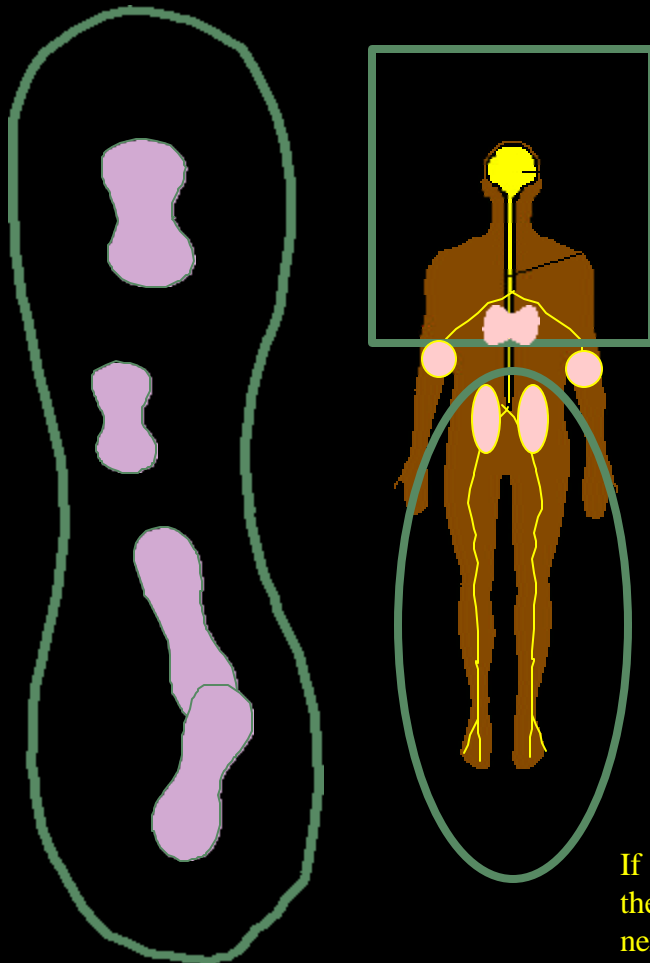

# The VSM Framework

# The Anatomy of a Business

## Nervous System

## Logical Model

If a man runs his own system then he is his own central nervous system, not so in highly complex distributed systems

# Syntegrater

12 Points - (Subjects)

30 Edges - (Participants)

20 Surfaces - (Local Prioritisation)

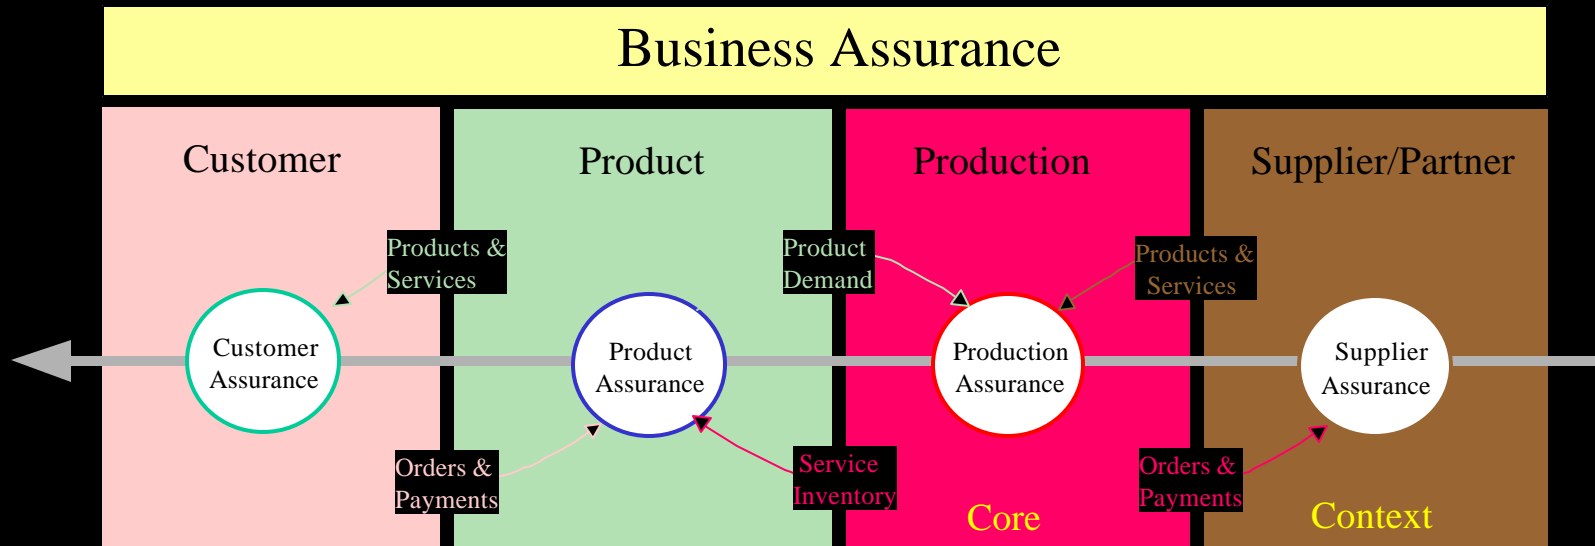

3 Plane Cuts - (Global Prioritisation)

# The VSM Framework

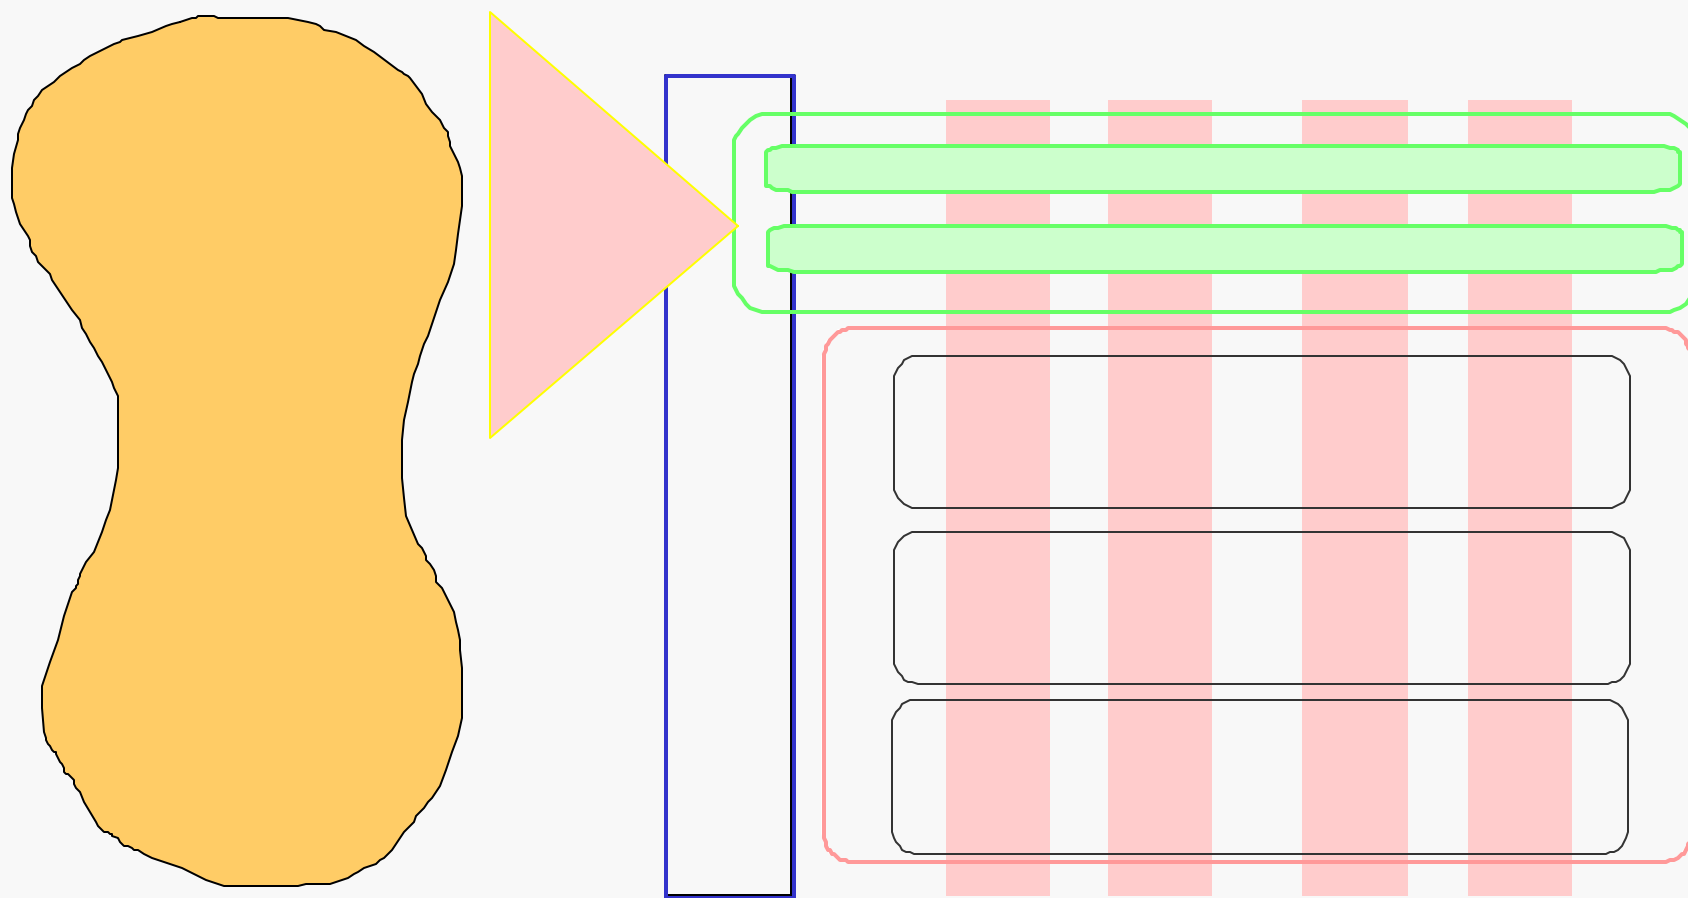

# The Enterprise Value Vector

*The patterned, purposeful interactions between a system's inputs and its outputs*

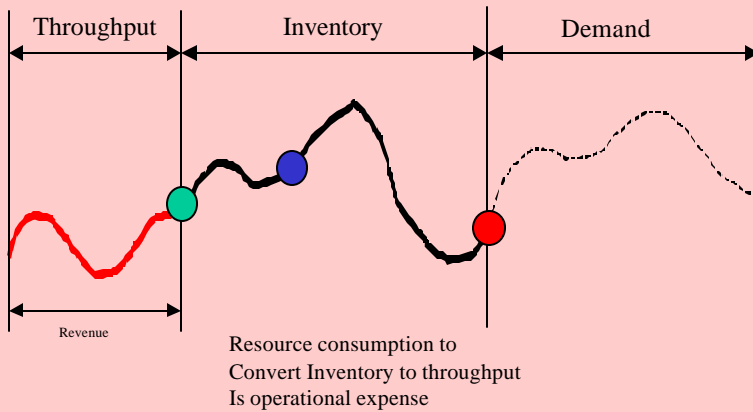

# VSM + Value Vector ~ Wholesale Embryology

# Examples

*Throughput is the rate of money coming into the business*

*Inventory is the money currently inside the system*

*Operating Expense is the money used to make throughput happen*
